

VSTF HMM Benchmark: retained outcomes change rankings

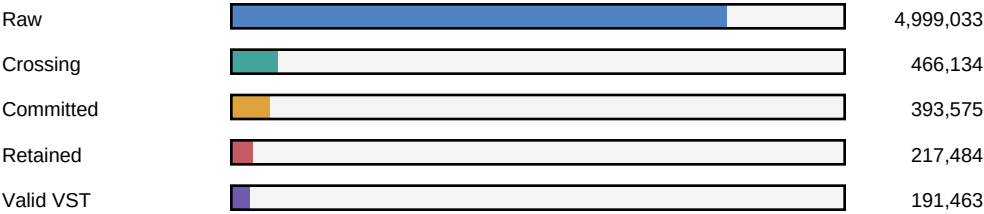

30 batches x 10,000 trajectories per system; master seed=20260917

A. Nested attrition

System A: high activity, fragile retention

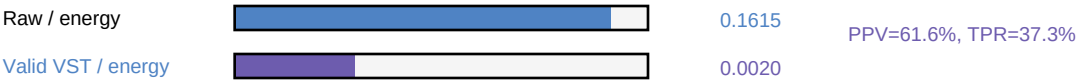

System B: moderate activity, retained outcomes

B. Efficiency and latent-ground-truth errors

System A

System B

C. Multi-seed robustness

Raw-sample to VSTE reversal: 0.0%
Crossing-event to VSTE reversal: 100.0%
Mean B/A VSTE ratio: 3.45
VSTE CIs are Monte Carlo intervals.

D. Sensitivity

sigma factor / tau -> reversal probability
